

Real-Time Automation with REALTECH

- Single solution for the enterprise
- Pure web interface
- Straightforward change and release implementation processes
- Reliable, transparent, and automated execution
- Security and compliance
- Execution of self-healing workflow

Centralize control of every IT and business process throughout your enterprise, in real-time.

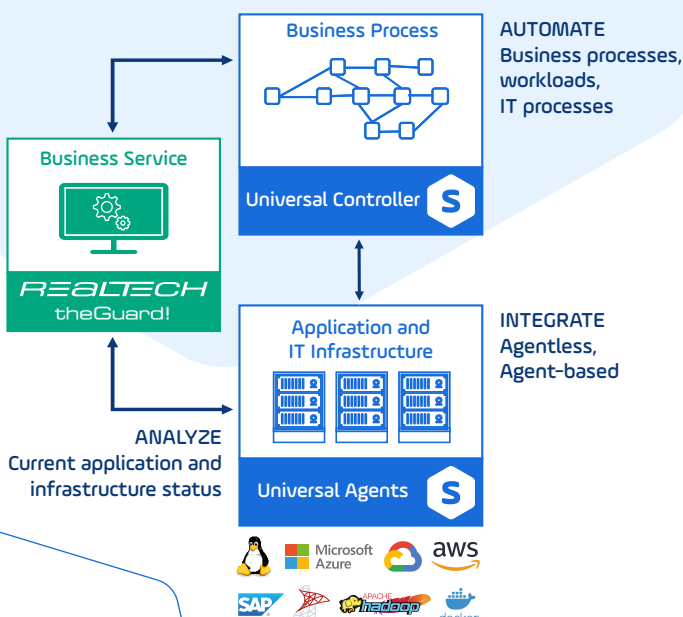

Together, Stonebranch and REALTECH help you orchestrate everything from infrastructure and business services to IT application and services.

Never worry about losing track of your data, issues with your IT infrastructure, or your data flow stopping. We'll help you analyze current IT processes, applications and infrastructure status, automate processes, and finally seamlessly integrate your applications, IT infrastructure and processes in a centralized automation management solution.

A Look into the real-time automation management solution partnership

The Stonebranch and REALTECH joint solution is built on two trusted core technologies.

The **Stonebranch Universal Automation Center (UAC)** provides workload automation and service orchestration, while **REALTECH theGuard!** monitors business processes. They complement each other to automate all business processes and immediately improve system reliability and performance.

How do the Stonebranch UAC and REALTECH theGuard! Work Together?

Monitor and control all IT and business processes with the support of REALTECH and Stonebranch.

1. Proactive interactions between UAC and REALTECH

While monitoring performance, theGuard! stays in constant contact with the UAC — it doesn't wait until a critical parameter is met to make the connection. This allows theGuard! to rapidly launch proactive, self-healing workflows when needed.

2. Easily integrate with business process applications

Integrations make it possible to establish agentless connections with relevant applications.

Available on the [Stonebranch Integration Hub](#), these pre-built, installable enhancements orchestrate automations across third-party applications and platforms, such as AWS, Docker, PeopleSoft, Salesforce, SAP, Slack, Teams, UiPath, and more.

3. Real-time automation management example: SAP Performance Optimization

theGuard! Business Service Manager constantly monitors SAP performance, such as work processes.

- To **optimize system load**, theGuard! will automatically trigger a UAC workflow that reduce the number of SAP jobs starting in parallel.
- To **maximize job quantity**, theGuard! will automatically trigger a UAC workflow that increases the number of SAP jobs starting in parallel.

Either trigger can be an event-based (such as reaching a specific parameter) or time-based.

REALTECH + Stonebranch:
analyze, automate, and
integrate with ease.

REALTECH's theGuard!

REALTECH's theGuard! Interface Manager and theGuard! Business Service Manager help implement seamless processes. These platforms proactively monitor the status, availability, events, and performance of the Universal Automation Center in scheduling IT infrastructure or business application processes.

Stonebranch Universal Automation Center

Universal Automation Center is a modern automation solution that enables monitoring of IT processes. It involves proactive management of Universal Agents, Universal Automation Center Database, Universal Automation Center Tomcat and Universal Automation Center Network Infrastructure.

Stonebranch Simplifies Real-time Automation

Stonebranch builds IT orchestration and automation solutions that help enterprises break down automation silos while gaining centralizing control of automated jobs, tasks, and workloads.

The Universal Automation Center platform supports your entire hybrid IT environment, including on-premises, cloud, and containerized microservices. The platform runs automation in real-time, responds intelligently to business needs, and integrates with just about any application or platform you can throw at it.
